# Using Google Maps Engine Connector for QGIS

## **Warning**

As of 29 January, 2015 Google Maps Engine has stopped creation of new free accounts. If you already have a Maps Engine account, the Google Maps Engine Connector will continue to work till 29 January, 2016.

Google Maps Engine is a cloud based mapping platform for creating and sharing custom maps. [Google Maps Engine Connector](#) is a plugin that allows you to view and upload Google Maps Engine data from within QGIS. This tutorial will go through the process of creating a Google Maps Engine account, obtaining necessary credentials for using the connector, creating a map using Google Maps Engine and consuming the resulting map in QGIS.

## **Note**

Disclaimer: I am the author of the Google Maps Engine Connector and currently part of the Google Maps team.

## Overview of the task

We will take a line layer representing bike routes in San Francisco and upload it to Google Maps Engine using the plugin. Once the layer is styled and a map is created, we will add that map to QGIS as a WMS layer.

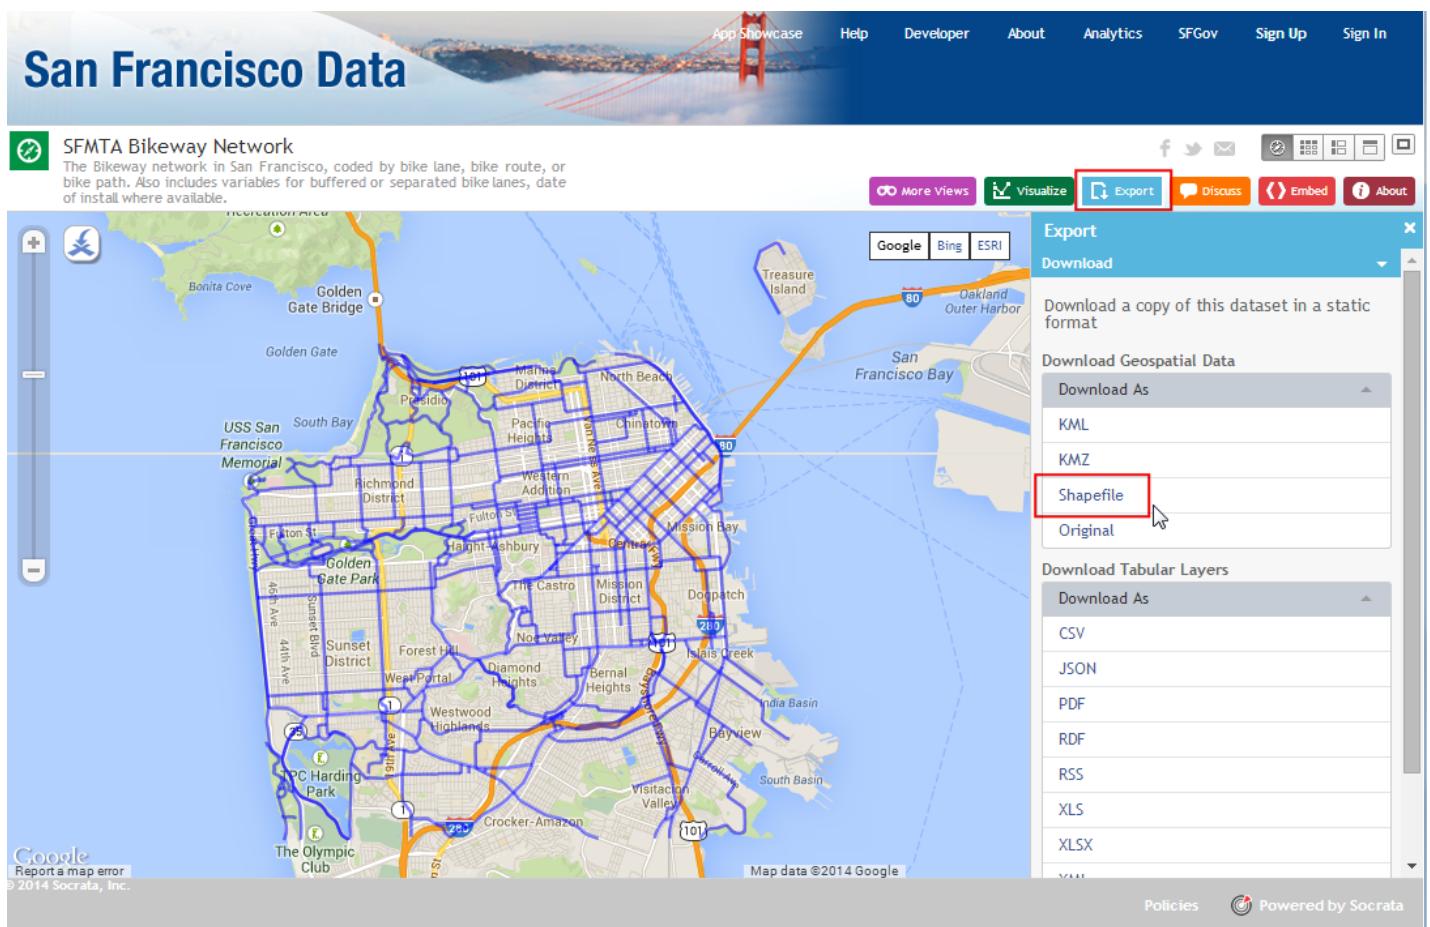

## **Other skills you will learn**

- Using the Google Developer Console to set up a new project for using Google APIs.

## Get the data

[San Francisco Data](#) is an excellent source of open data for San Francisco.

1. Download the [SFMTA Bikeway Network](#) shapefile using the Export option on the portal.

Data Source: [SFMTA]

## Create a Google Maps Engine account

2. You can sign up for a free Google Maps Engine trial account. The trial account is a full featured Maps Engine instance with limited storage quota. Visit [Google Maps Engine homepage](#) and click the Get started with a free account link.

Blog post nearly 50,000 retail touchpoints in real-time.' On the right side, there's a large text block about creating custom maps, followed by a red-bordered 'Get started with a free account' button with a blue arrow icon. At the bottom left, there's a URL bar containing 'https://mapsengine.google.com/projects/new'."/>

Get started with a free account

https://mapsengine.google.com/projects/new

3. You will need to sign-in to your Google account. If you wish to use your work email, you can create a new Google account with your work email address as well. Once signed in, you will see the Create a Maps Engine Project screen. Enter a Project Name which will identify your account when using Google Maps Engine. Accept the terms and click Accept and create button.

# Google Maps Engine

## Create a Maps Engine Project

Get started with Maps Engine to create custom maps to share & publish on the web.

Welcome [REDACTED] Please enter your desired project name.

Wrong account ?  
Switch accounts by clicking on  
your name above.

Project Name:

Test Project

The name will be used to identify your project in Maps Engine.

Project Administrator:

To get started you are the project administrator. Further administrators can be added from within Maps Engine. [Learn More](#).

- I have read and agree to the [Google Maps Engine Online Terms of Service](#).  
 I would like to receive emails about Maps Engine updates, special offers and events.

**Accept and create**

## Create a Google Developer Console project

4. The Google Maps Engine Connector uses the Google Maps Engine API to access the data stored in your account. You will need to obtain special credentials which the plugin will use to programmatically access your data. Visit [Google Developer Console](#) and click Create Project. Enter GME Connector for QGIS API as the PROJECT NAME and gme-qgis-api as the PROJECT ID. These names are just a suggestion - you may use any name and id you like.

### New Project

PROJECT NAME

GME Connector for QGIS API

PROJECT ID

gme-qgis-api

**Create**

Cancel

5. Once the project is created, click the APIs & auth link. Scroll down and find the Google Maps Engine API. Click the OFF button to toggle it to ON.

The screenshot shows the Google Developers Console interface. On the left, a sidebar lists various sections like Overview, APIs & auth (which is selected and highlighted with a red box), APIs, Credentials, Consent screen, Push, Permissions, Settings, Support, App Engine, Compute Engine, Cloud Storage, Cloud Datastore, Cloud SQL, BigQuery, and Cloud Development. The main area displays a list of APIs with their request limits and current status (OFF). The 'Google Maps Engine API' is specifically highlighted with a red box around its row, and a cursor is hovering over its 'OFF' button, indicating the user needs to click it to toggle it to ON.

API	Requests/day	Status
Google Contacts CardDAV API	20,000,000	OFF
Google Maps Android API v2		OFF
Google Maps Coordinate API	1,000	OFF
Google Maps Embed API	2,000,000	OFF
<b>Google Maps Engine API</b>	10,000	OFF
Google Maps Geolocation API	100	OFF
Google Maps JavaScript API v3	25,000	OFF
Google Maps SDK for iOS		OFF
Google Maps Tracks API		OFF
Google Mirror API	1,000	OFF
Google Picker API	10,000	OFF
Google Play Android Developer API	200,000	OFF
Google Play App State	20,000,000	OFF
Google Play Game Management	1,000,000	OFF
Google Play Game Services		

6. Next, click on the Credentials link. Click CREATE NEW CLIENT ID under the OAuth section.

[Return to original console](#)[Send feedback](#)[Privacy & Terms](#)

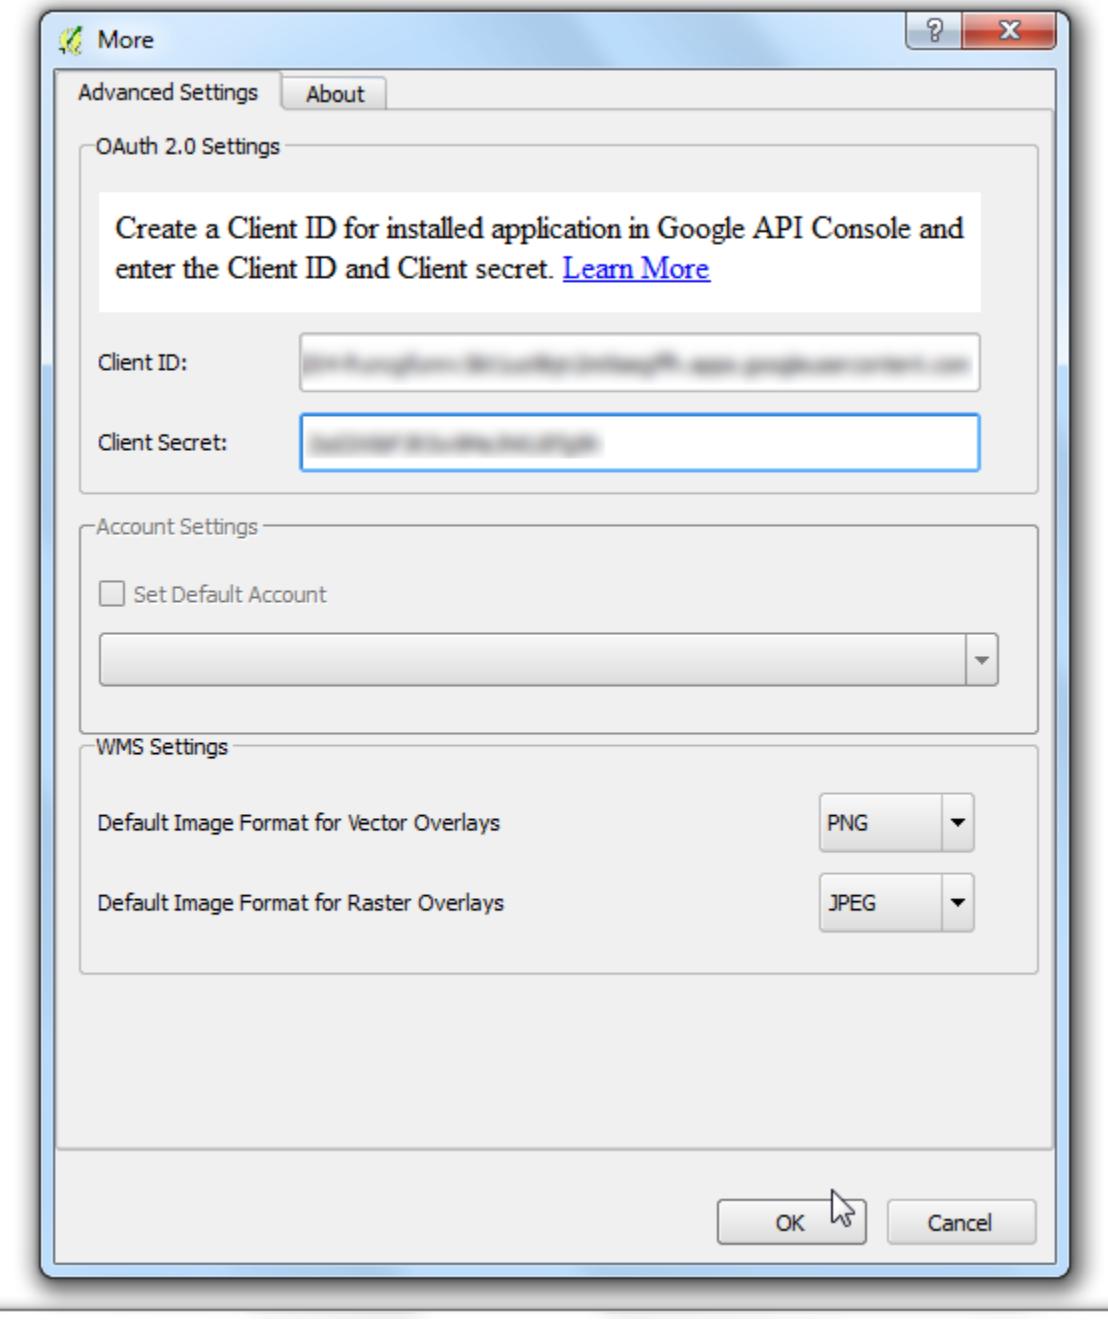

9. Back in QGIS, visit Plugins > Manage and Install Plugins.... Find the Google Maps Engine Connector plugin and click Install plugin.

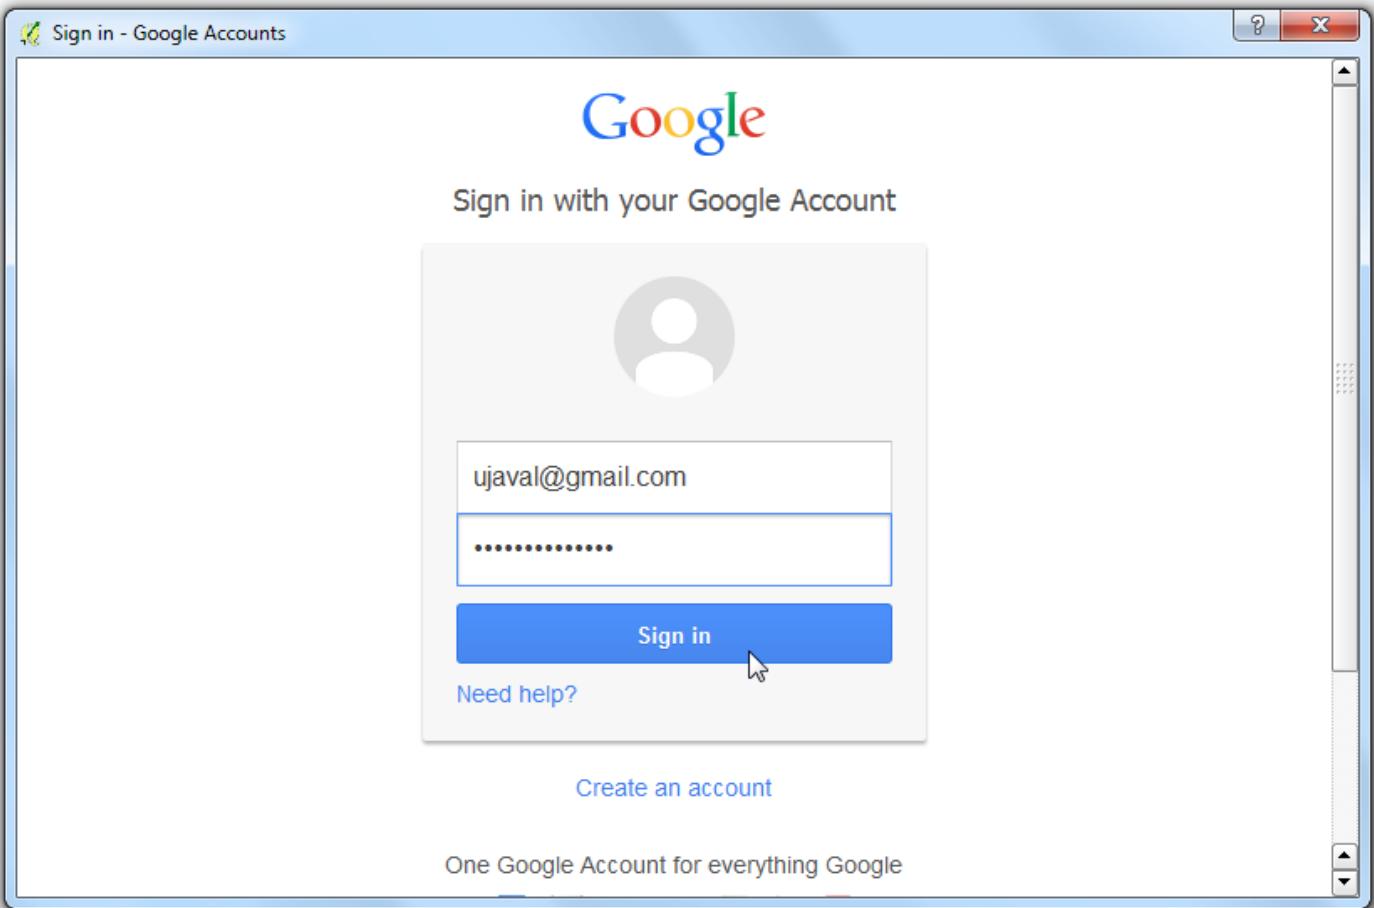

10. Once the plugin is installed, you will see a new toolbar in QGIS. This toolbar contains various tools to work with Google Maps Engine. Click the More button.

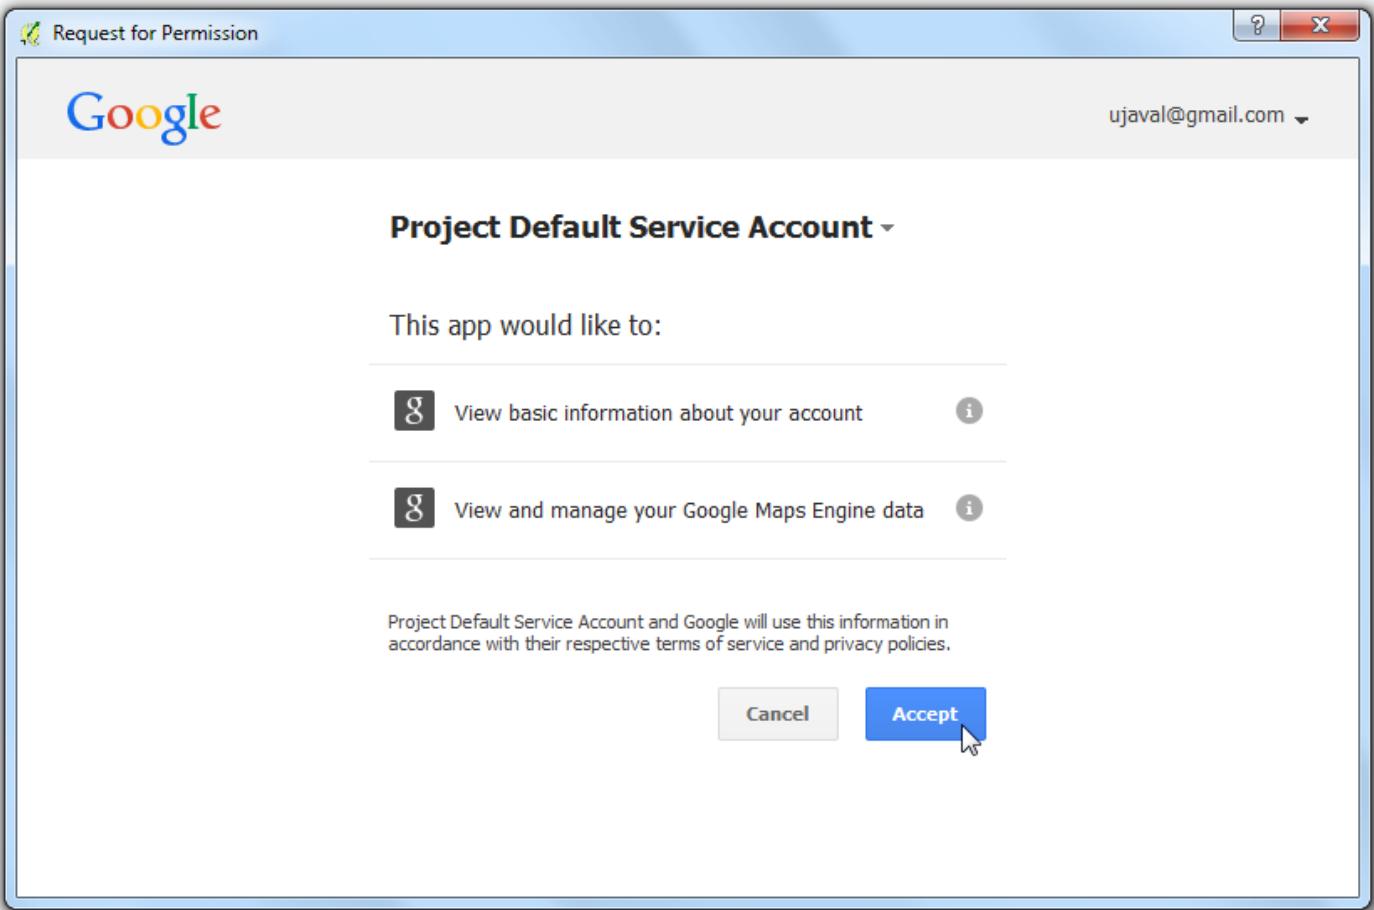

11. In the Advanced Settings dialog, enter the Client ID and Client Secret you obtained from Google Developer Console. Click OK.

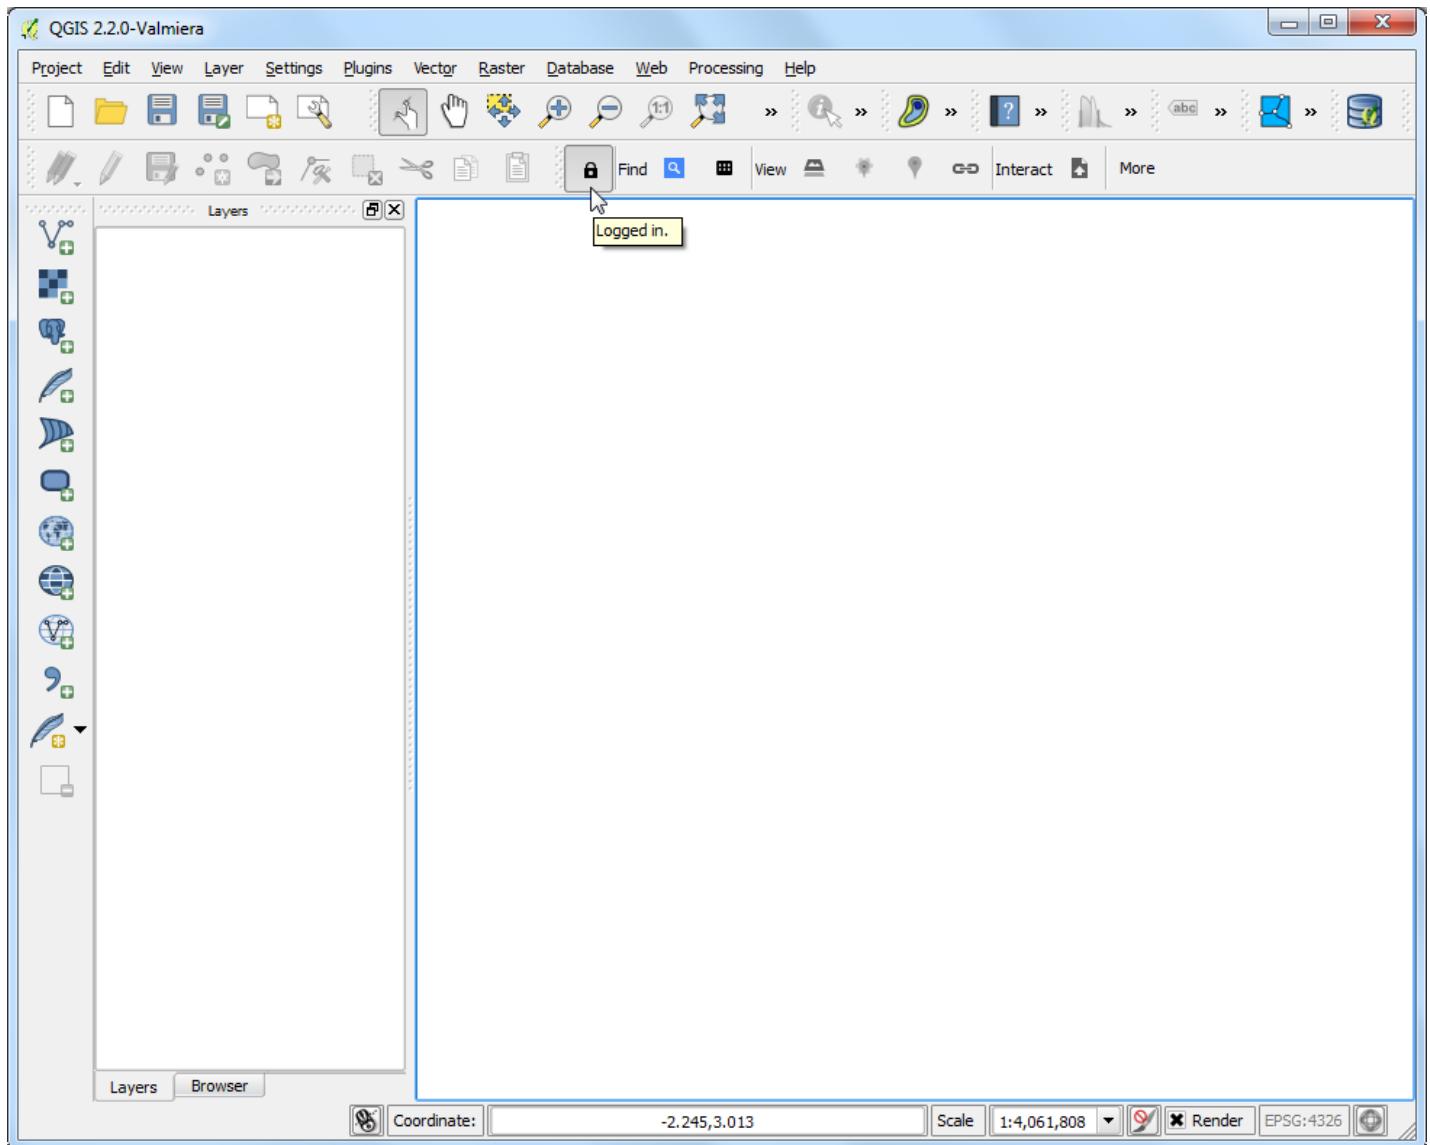

12. As you entered new API credentials, you will be prompted to log-in and authorize the plugin to use these. Sign-in to your Google account.

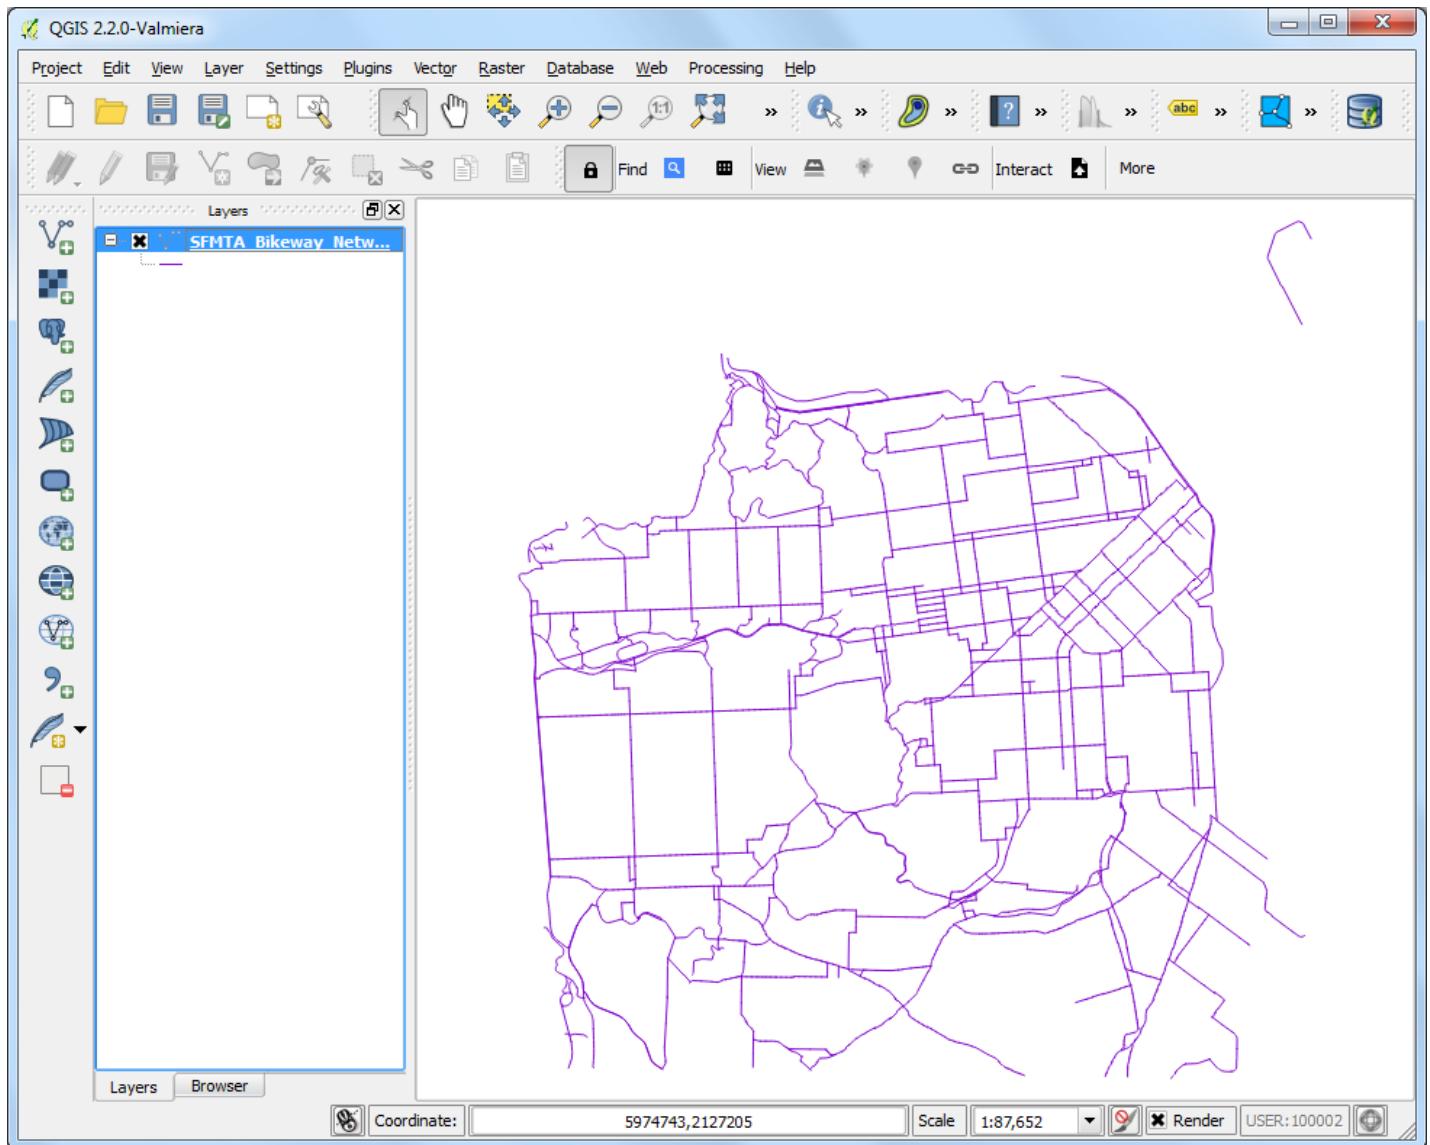

13. Click Accept in the next screen.

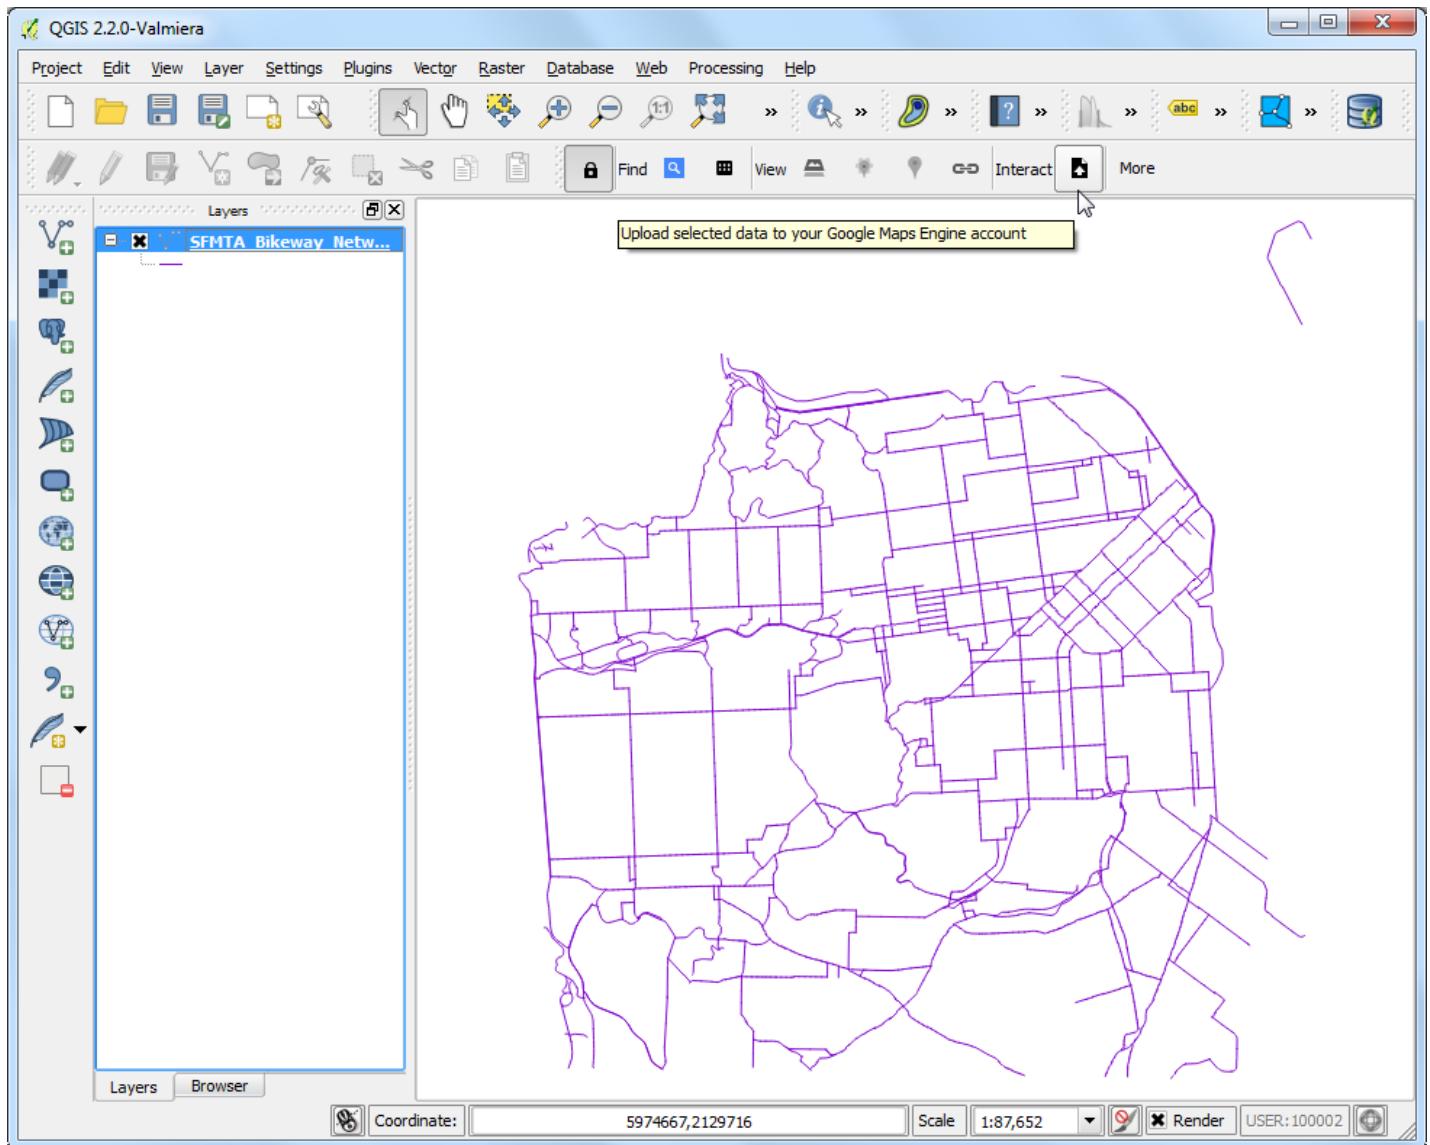

14. If all went well, you will see a message indicating you have successfully logged in.

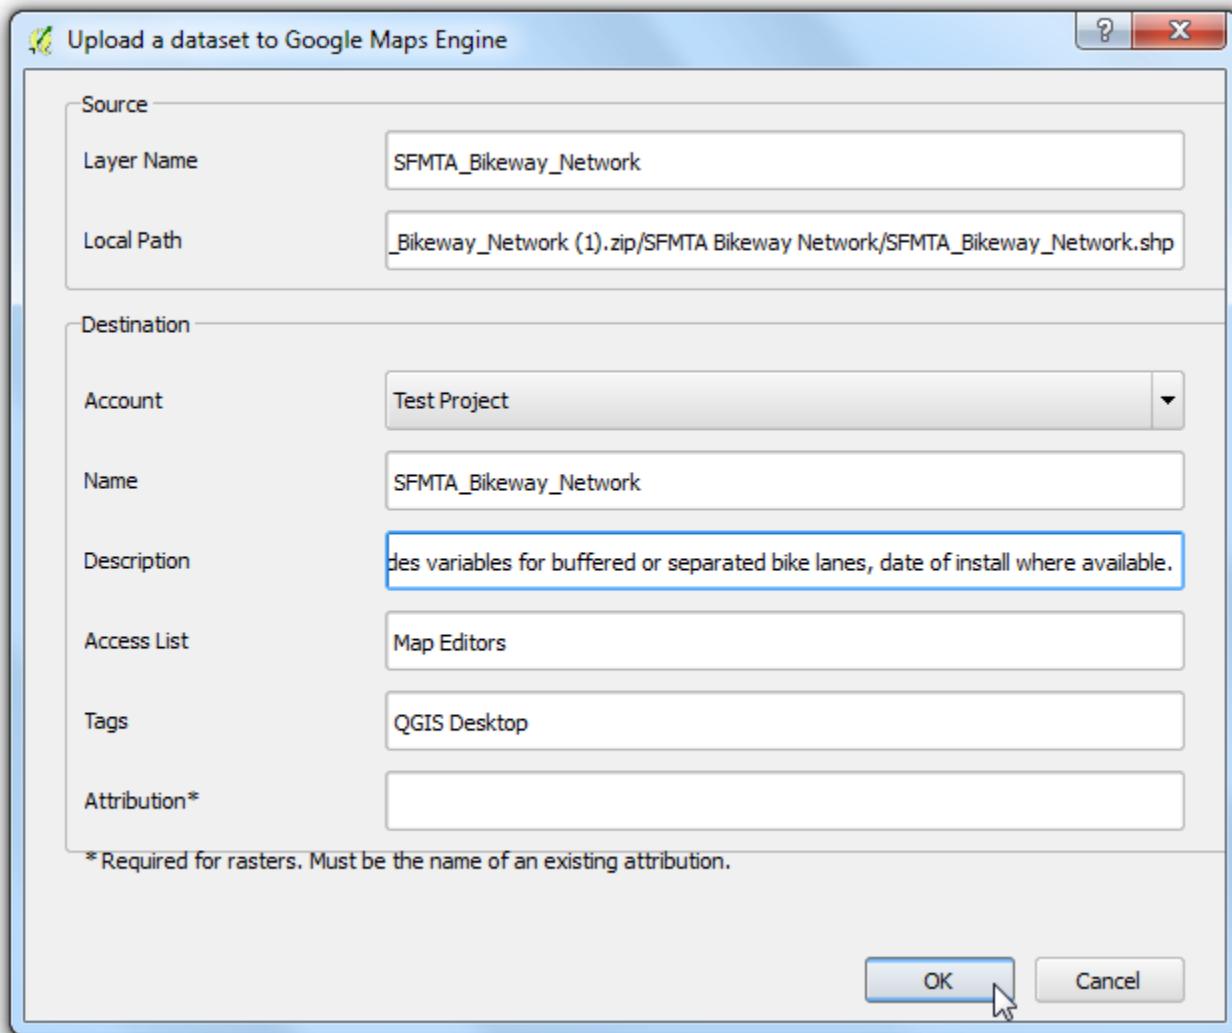

15. Now lets add the SFMTA Bikeway Network layer that was downloaded earlier. Go to Layer > Add Vector Layer. Browse to the downloaded SFMTA\_Bikeway\_Network.zip file and click Open. Select the SFMTA\_Bikeway\_Network.shp layer and click OK.

16. One of the features of the Google Maps Engine Connector plugin is the ability to upload datasets directly from QGIS. Select the SFMTA\_Bikeway\_Network layer and click Upload icon in the toolbar.

17. In the Upload a dataset to Google Maps Engine dialog, enter a Description of the dataset. You may leave all other settings to default values. Click OK.

18. The plugin will use the Google Maps Engine API to upload the layer and create a Google Maps Engine *Data Source*. Once the upload is finished, a new browser tab will open and take you to the newly created data source.

22. Choose the color and label options under the Line style section. Click Apply to view the style settings applied to your layer. You may also select No Basemap option from top-right corner to allow you to see your layer without the underlying basemap. Once you are satisfied with the styling, switch to the Info windows tab.

## SFMTA\_Bikeway\_Network

The screenshot shows a map styling interface for the SFMTA Bikeway Network. On the left, there's a panel with various styling options:

- Styles**: A tab labeled "Info windows" is highlighted with a red box.
- Display rule name**: An input field.
- Zoom levels**: A slider set to 13.
- Line style**: Options for Line color (red), Line width (2px), Border color (black), and Border width (1px).
- Label style**: Options for Label color (black), Label outline (white), and Label size (11px, Normal).
- Filters**: A section with "Add filter".

At the bottom of the styling panel are "Add rule" and "APPLY" buttons. Below the styling panel is a text area containing "javascript:".

On the right is a map showing a dense network of red lines representing bikeways. The map includes labels for "MIDDLE", "SANCERANGISOBAL", and "ALEMANW". The top right corner of the map has a red box around the "No Basemap" button. The top right of the entire interface has "Google Maps", "Publish on exit", and "Exit" buttons.

23. Here you can specify what content is shown when a feature is clicked on the map. You can access the feature attributes using the markup `{attribute_name}`. In this case, we just want to display the street name for the line feature. Enter the following in the text area. Click Apply and click on any line feature on the map to test the info window code. When done, check the Publish on exit button and click Exit.

```
<div class='googeb-info-window' style='font-family: sans-serif'>
  {STREETNAME}  {TYPE}
</div>
```

25. Select Create new and enter SFMTA Bikeway Network as the Map title.

Add to map ×

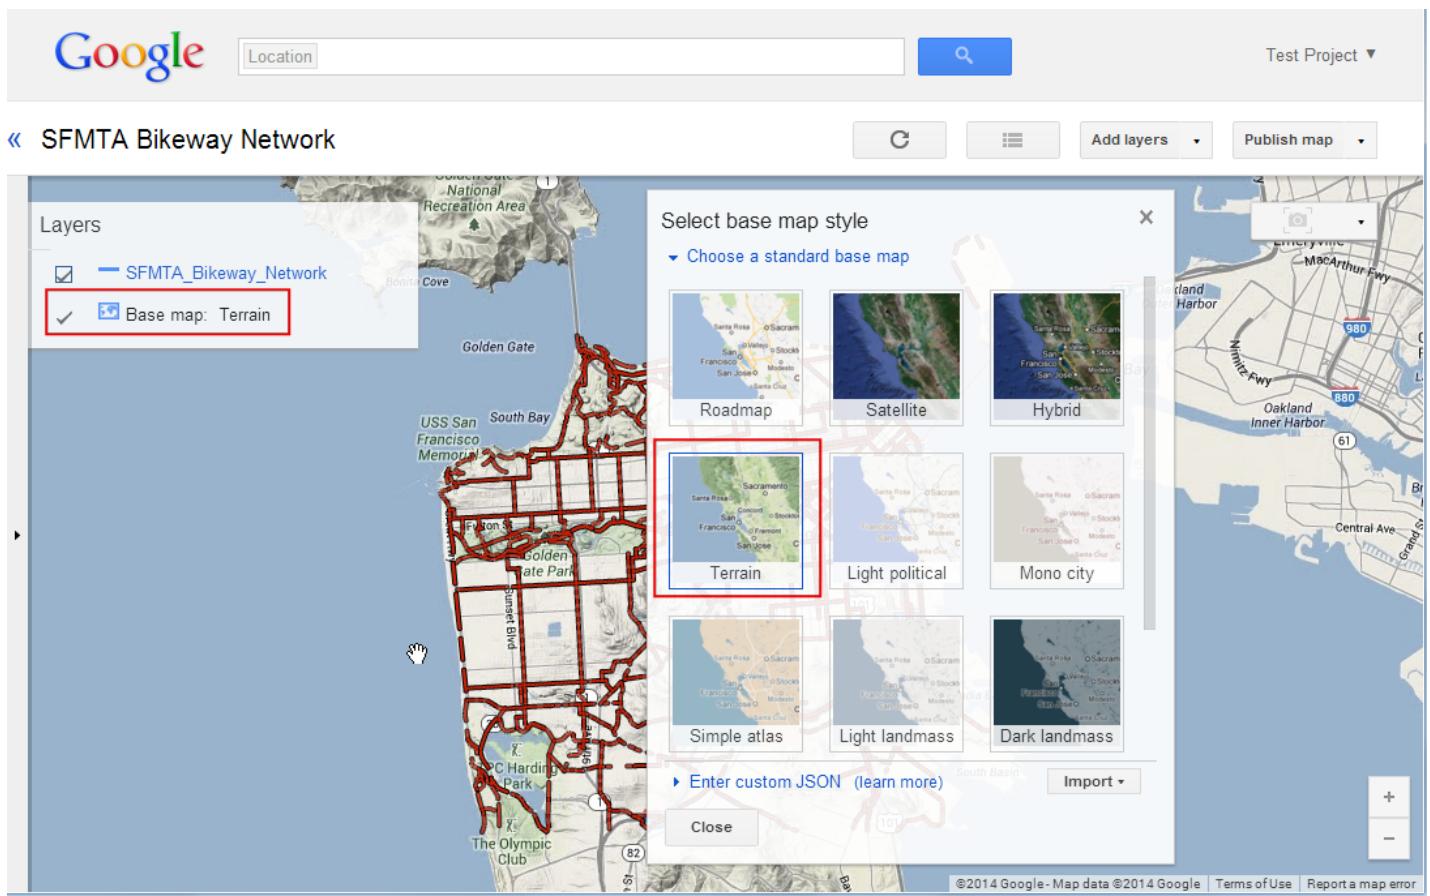

1 layer selected for map

▶ Select existing

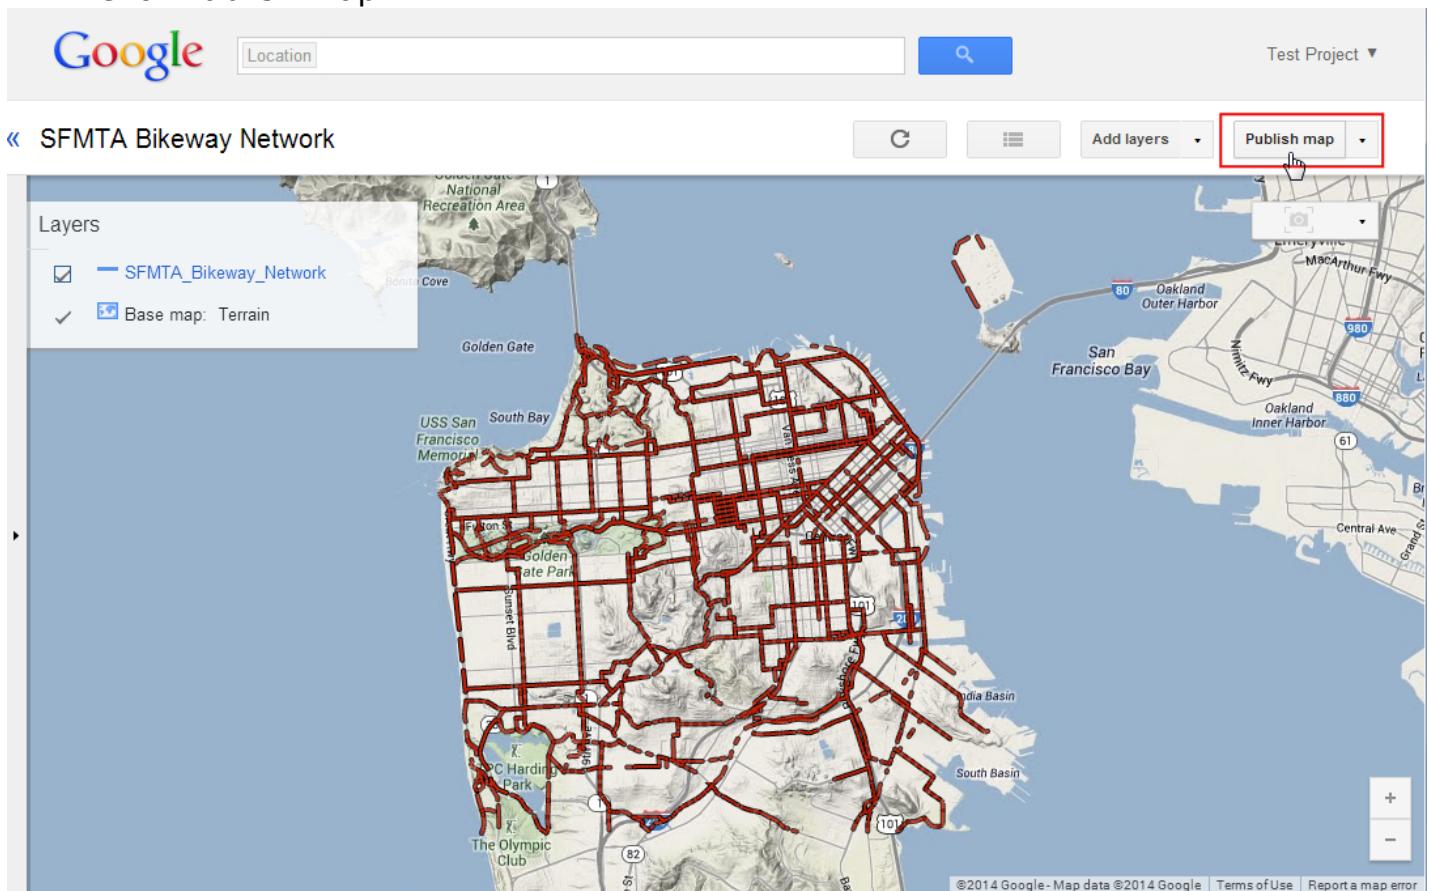

▼ Create new

Map title

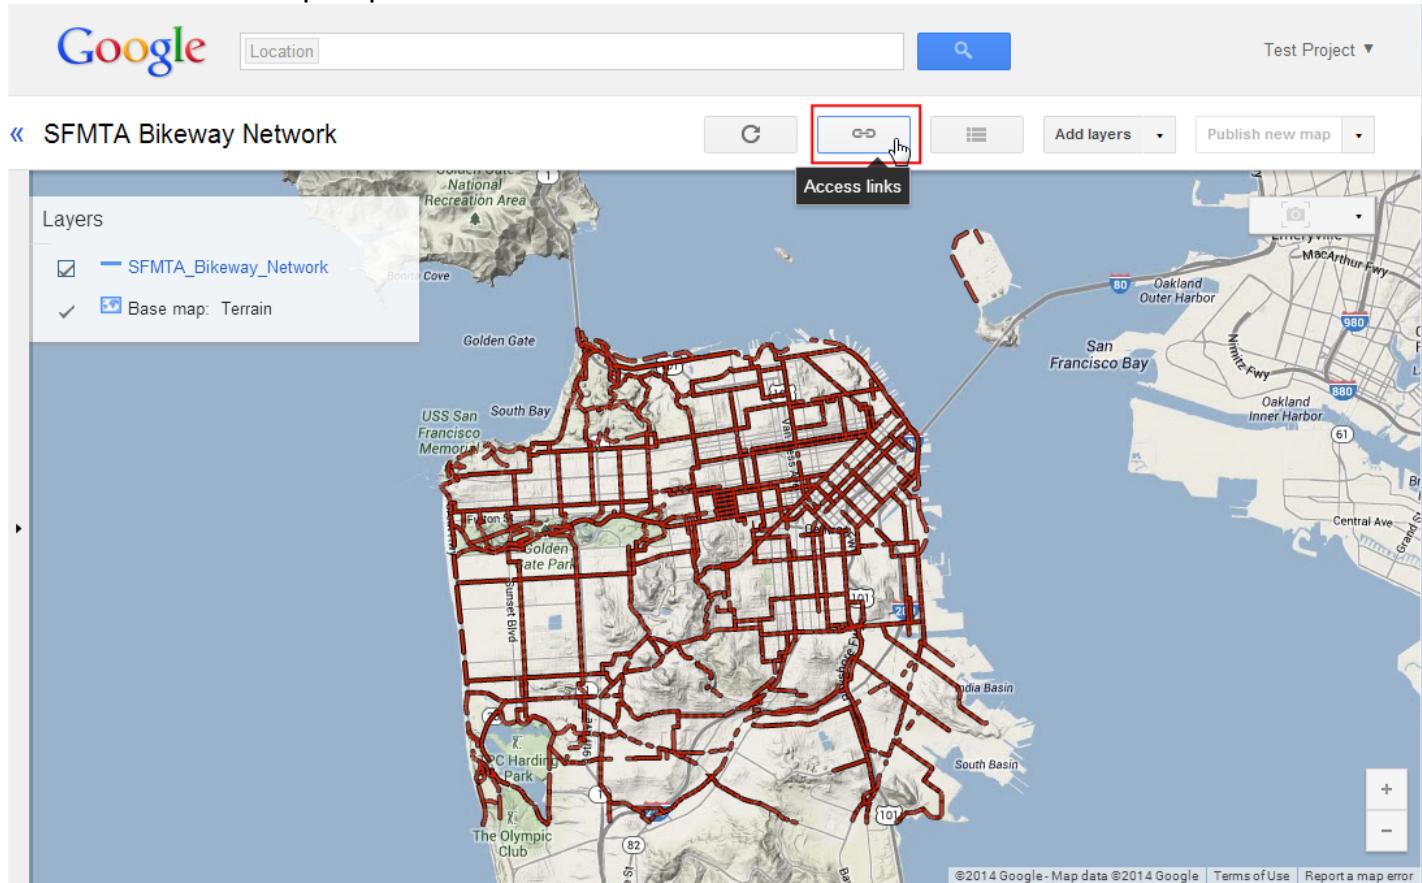

26. You will see a new map containing the styled layer. You have an option of choosing different basemaps for the map. Since this is a bike path map, you can select the Terrain style basemap.

27. Click Publish map.

28. Once the map is published, click on the Access links icon.

29. You will see various options to view, embed and access the newly created map. Since we will be accessing the map using the QGIS plugin, you do not need any links from here.

X

## Access Links

<https://mapsengine.google.com/13476080153727555143-08887688179650036554-4/n>

Embed link

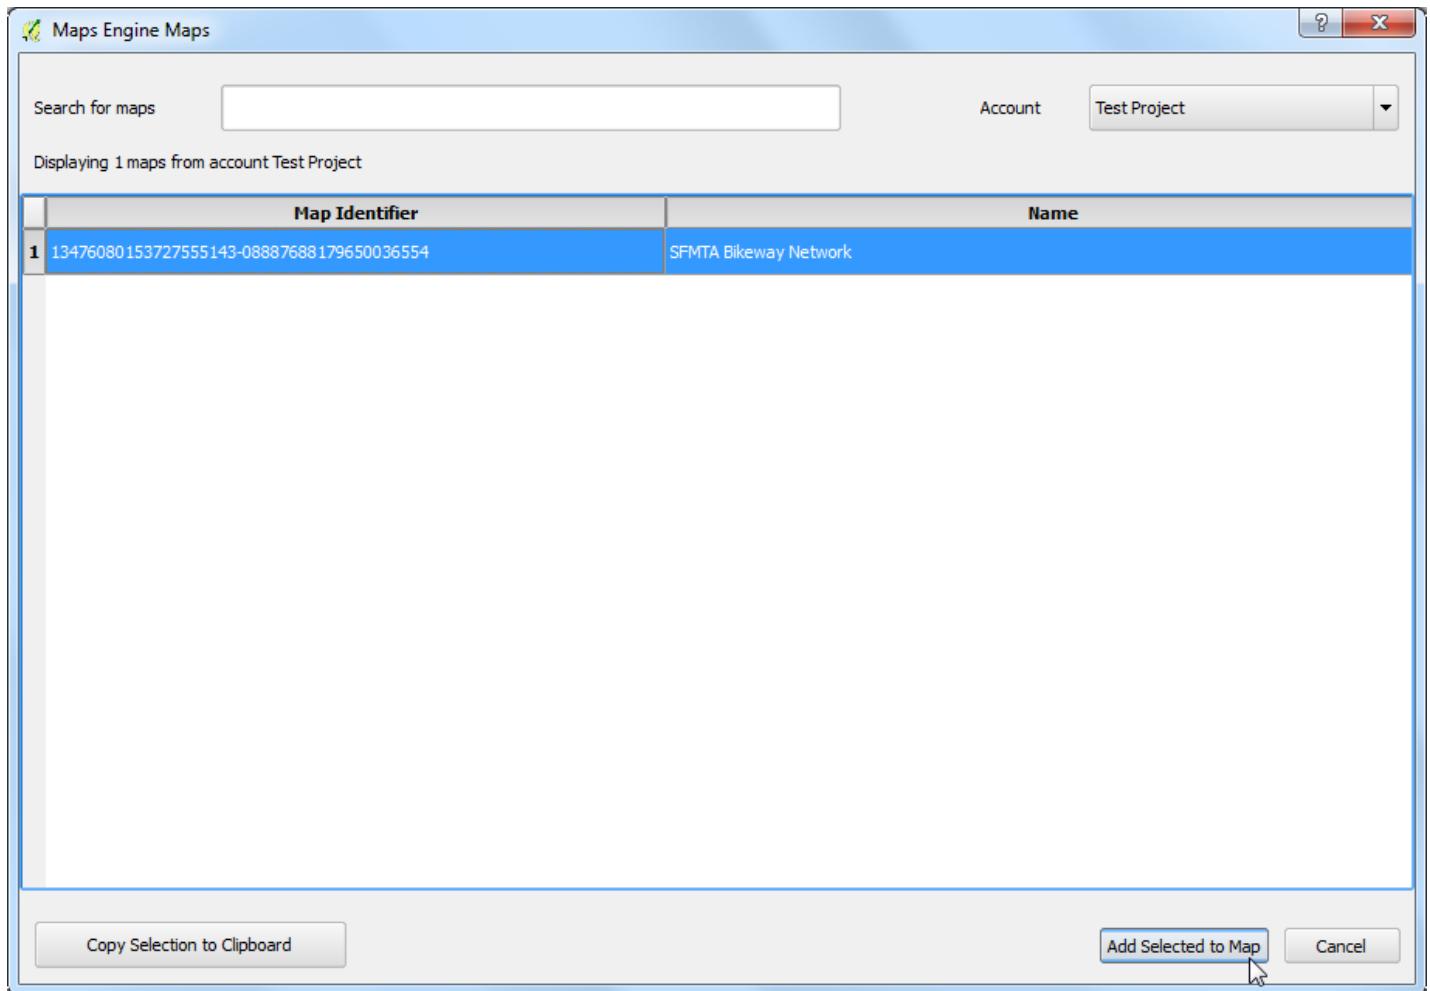

```
<iframe src="https://mapsengine.google.com/13476080153727555143-08887688179650036554-4/widget/in_iframe" width="70%" height="600px"></iframe>
```

Done

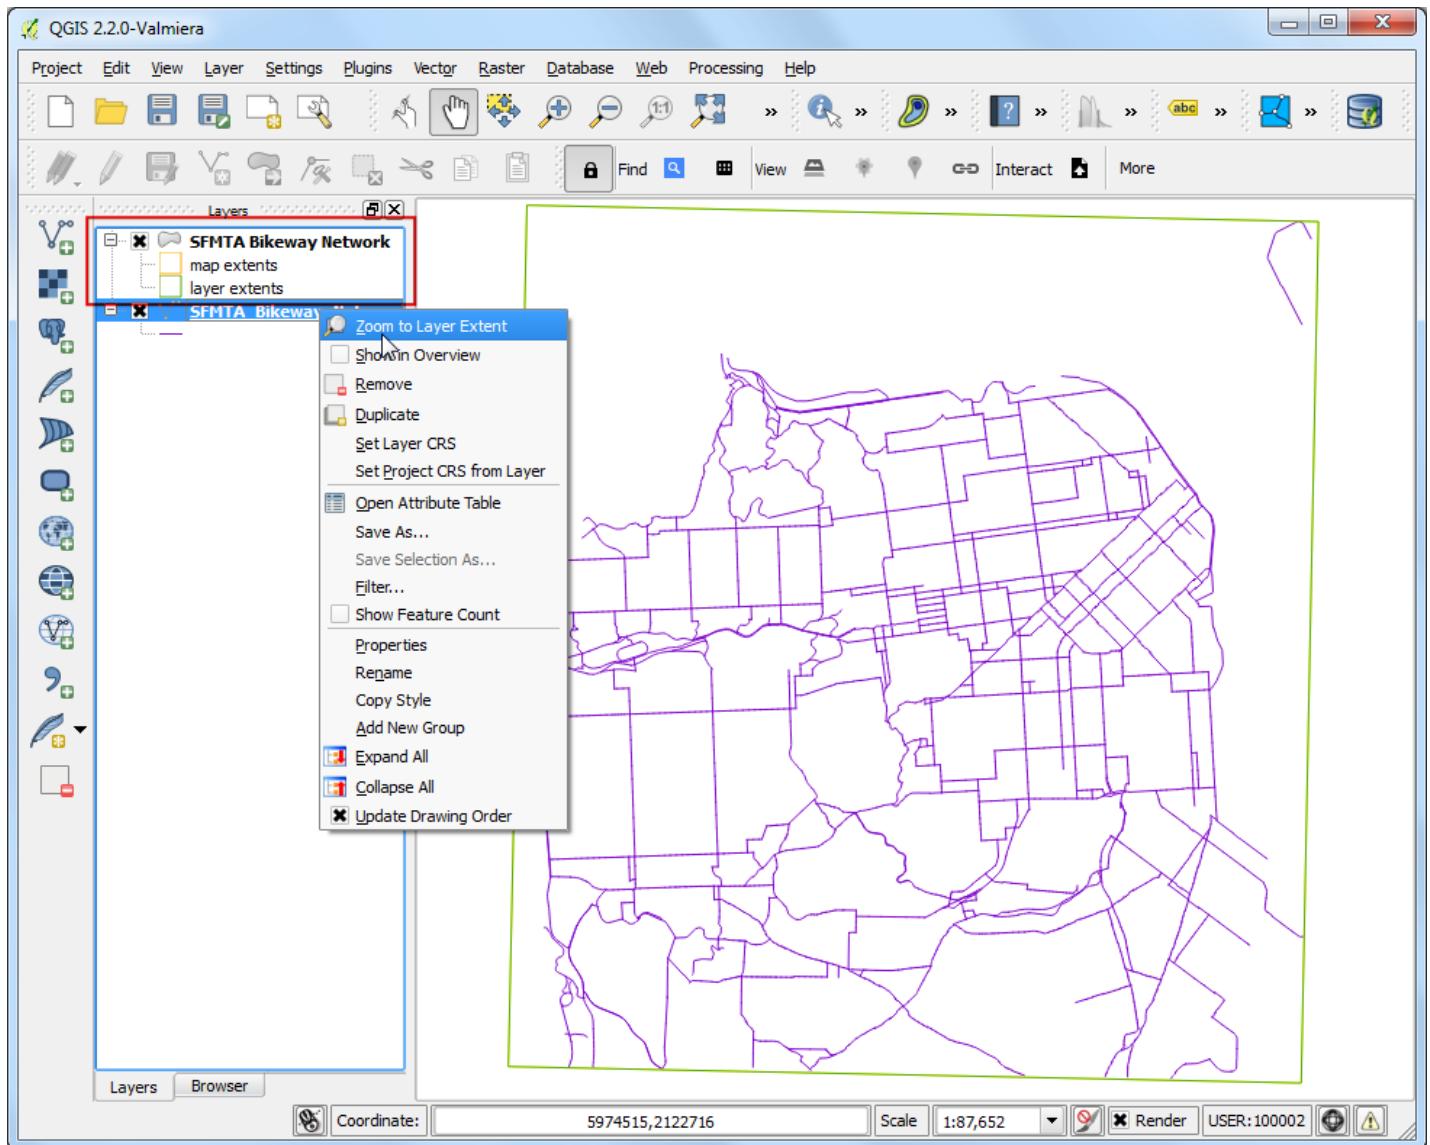

30. Back in QGIS, click the Search icon in the toolbar.

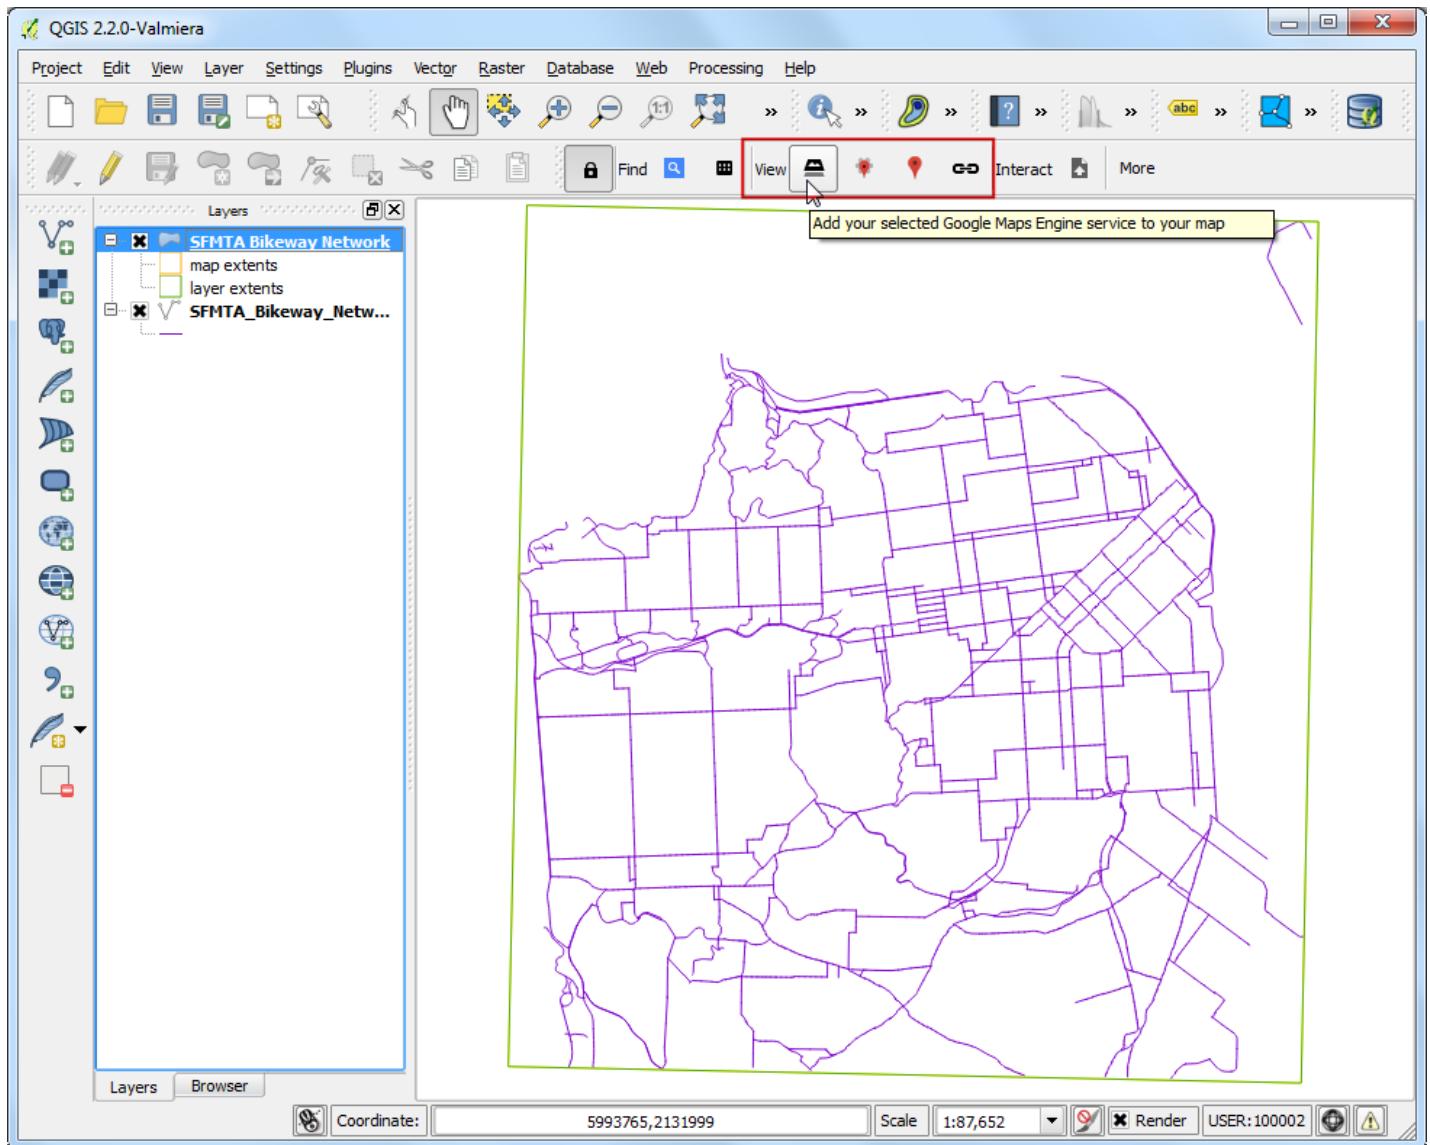

31. In the Maps Engine Maps dialog, you will see your map listed. Click on the row to select it. Click Add Selected to Map.

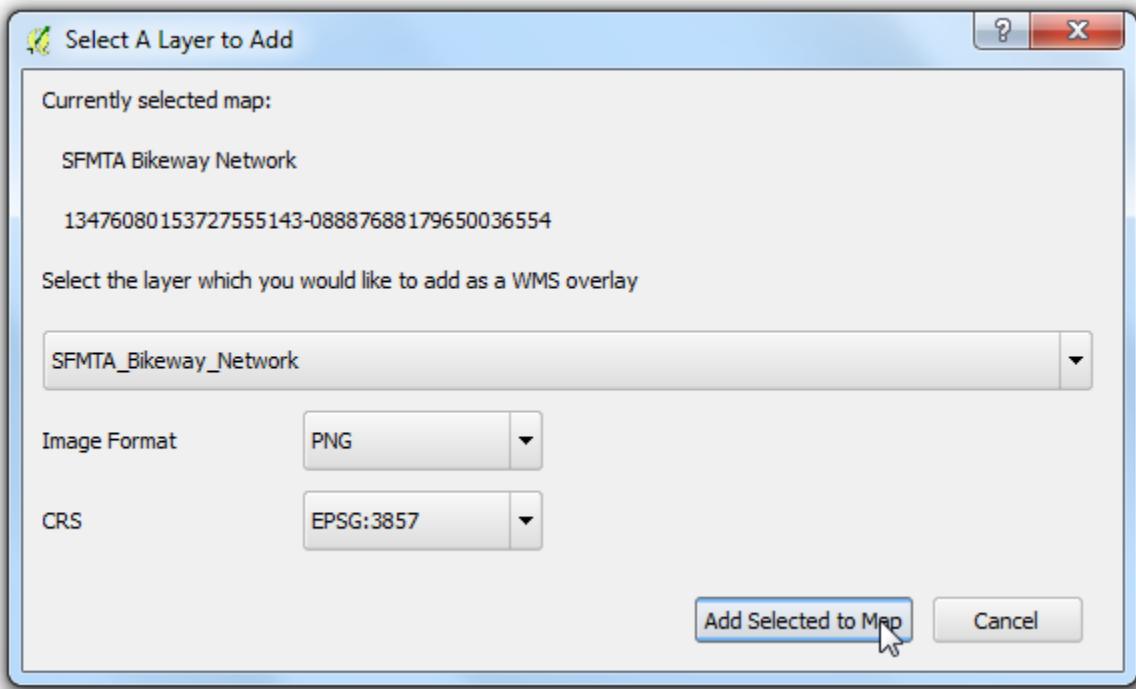

32. The plugin will query Google Maps Engine and load a vector layer containing the bounding box of the map. If you do not see any data on the canvas, right-click on the SFMTA\_Bikeway\_Network layer and select Zoom to Layer Extent.

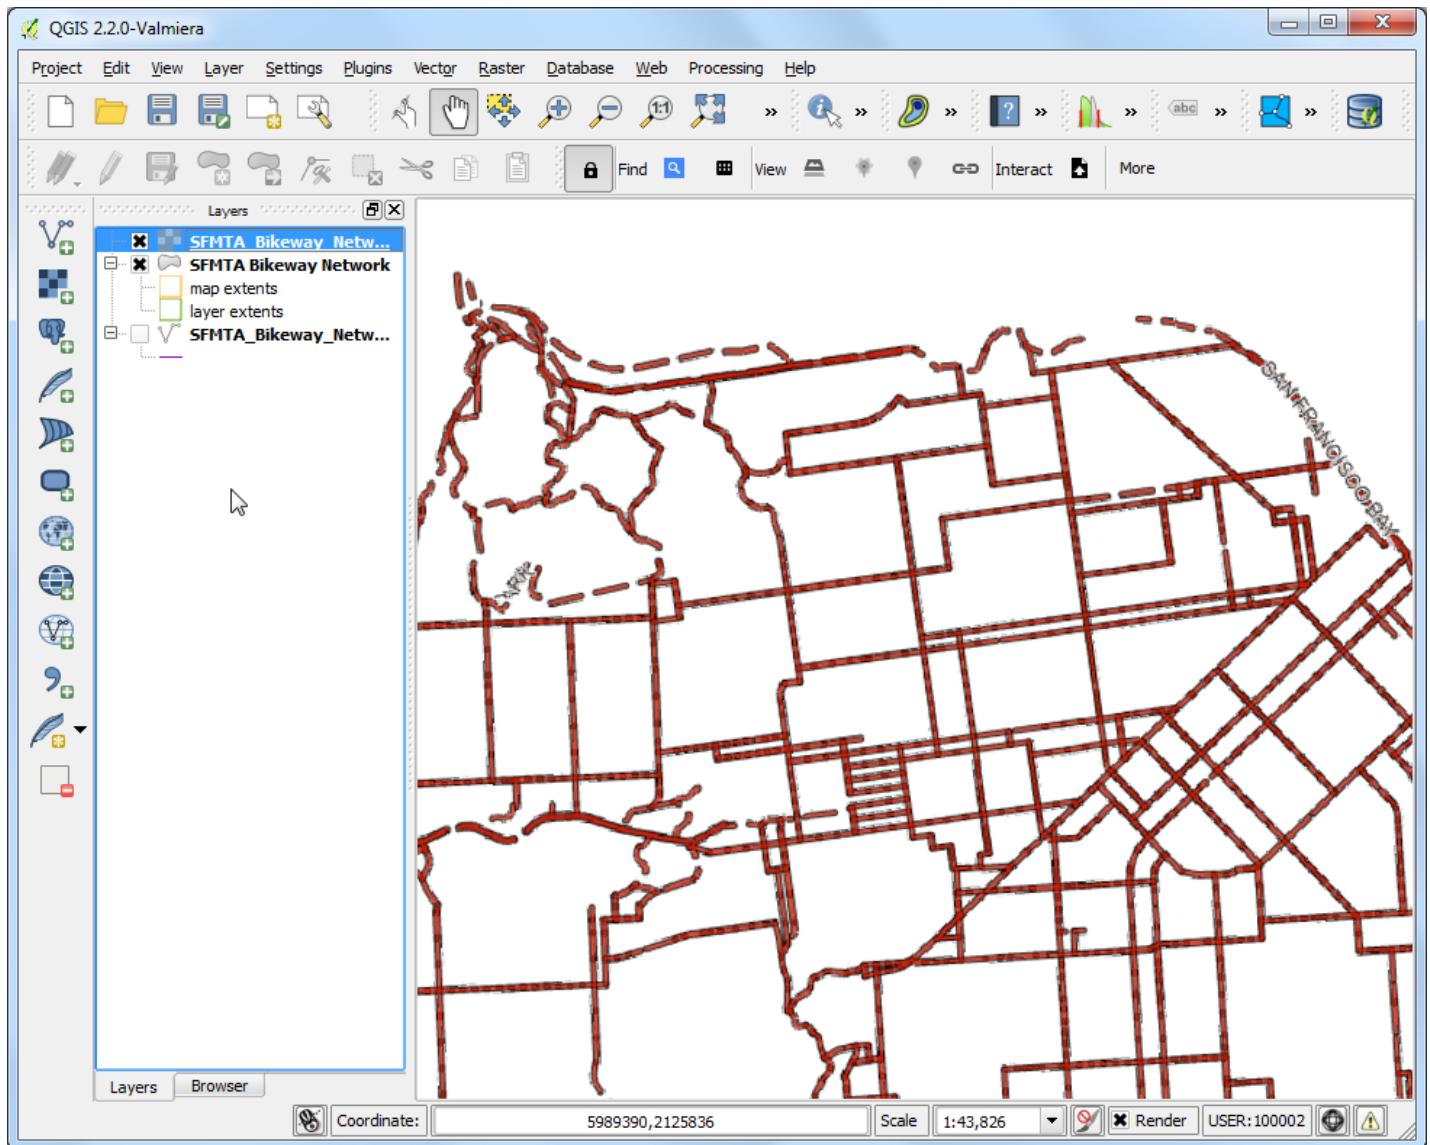

33. Click on the bounding box layer to select it. You will notice that the View tools are now enabled. Click on the WMS Overlay icon in the toolbar.

34. In the Select A Layer to Add dialog, choose the SFMTA\_Bikeway\_Network layer and click Add Selected to Map.

35. A new WMS layer will be added to QGIS and you will see your styled layer from Google Maps Engine displayed in QGIS.

Hope this tutorial gives an overview of the capabilities of the plugin. You can visit the [plugin homepage](#) to view the source code and learn more about the plugin.
